PROJECTS

News Recommendation and Summarizer (Minor Project)

- It is a technology that utilizes algorithms to suggest relevant news articles to users based on their interests and browsing history. It employs machine learning and natural language processing techniques to analyze content and generate concise summaries of articles, making it easier for users to digest information quickly. This technology aims to enhance user experience by providing personalized news recommendations and condensing lengthy articles into brief, informative snippets.

Public Transport System Management

- It's a group project so we focused on creating a Software Requirements Specification (SRS) report for Public Transport System Management. We gathered stakeholder requirements, conducted market research, and helped define functional and non-functional specifications. Additionally, we contributed to UI design discussions and facilitated feedback sessions. Our efforts ensured the timely completion of the SRS report, where we received recognition for our attention to detail and proactive approach. This experience deepened our understanding of public transport management and enhanced our skills in requirement gathering and collaboration.

EDUCATION

Advanced College Of Engineering and Management

Bachelor

📅 2021-Continue... 📍 Kalanki-14-Kathmandu

Kathmandu Model Sec. School

High School

📅 2018-2020 📍 Balkumari-12-Lalitpur

Aishwarya Vidya Niketan Sec. School

Schooling

📅 2017 📍 Dhangadhi-5-Kailali
